PROPOSAL

Provisional License and Proof of Concept

Thrift Bank Digital Banking Program

AllBank

Submitted by Open Disbursement Technologies, Inc. (ODTI)

PROPOSAL NUMBER	ODTI-2026-001	**PROPOSAL DATE**	20 July 2026
PROPOSAL REVISION	1.0	**VALID UNTIL**	19 August 2026
STATUS	Submitted	**SUBMITTED TO**	AllBank
CLASSIFICATION	Confidential Commercial Information		

1 Purpose

This Proposal is submitted by Open Disbursement Technologies, Inc. ("ODTI") to AllBank for the conduct of a controlled Proof of Concept under the Thrift Bank Digital Banking Program.

The Proof of Concept is intended to determine whether a reusable banking operating capability may support an agreed banking service within AllBank's institutional environment.

The Proof of Concept shall not constitute a production deployment, production license, or long-term commercial commitment.

The attached Thrift Bank Digital Banking Program Guide — AllBank Edition provides the institutional and architectural context for this Proposal.

2 Offer

ODTI proposes to provide:

- a provisional license to the x-change platform;
- institutional discovery;
- joint selection of one banking ceremony;
- development and enablement of the institution-specific integration driver;
- installation and configuration of the platform;
- controlled execution of the Proof of Concept;
- technical support during the Proof of Concept; and
- technical and executive findings.

The banking ceremony shall be selected jointly by AllBank and ODTI. The Proof of Concept shall be limited to the scope agreed by the Parties.

3 Deliverables

Upon completion of the Proof of Concept, ODTI shall deliver:

- a configured Proof of Concept environment;
- an institution-specific integration driver for the agreed interface, where required;
- a demonstration of the agreed banking ceremony;
- technical findings;
- executive findings; and
- a recommendation for subsequent engagement.

The institution-specific integration driver shall be developed and enabled as part of the Proof of Concept. The driver shall remain a maintained component of the ODTI platform and shall be made available to AllBank under the applicable provisional or production license.

The initial driver enablement is included in the Proof of Concept. It shall not be described as free development.

Items outside the agreed Proof of Concept scope shall require separate written agreement.

4 Commercial Terms

4.1 Proof of Concept

ITEM	COMMERCIAL TERMS
Standard Proof of Concept Fee	**USD 2,000**
Fee Applicable to this Proposal	**WAIVED**

The waiver applies only to the Proof of Concept fee stated above. It does not establish production pricing or waive the cost of any later stage.

4.2 Indicative Production License

LICENSED ACTIVE CUSTOMER ACCOUNTS	INDICATIVE ANNUAL LICENSE
Up to 10,000	USD 10,000 minimum
Above 10,000	Approximately USD 1.00 per additional Licensed Active Customer Account per year
Enterprise or institution-wide deployment	Site License or other commercial structure by mutual agreement

"Licensed Active Customer Account" shall be defined in the definitive production agreement. The final definition may address eligible account classes, active-account criteria, dormant accounts, duplicate customer relationships, corporate and institutional accounts, test and administrative accounts, and reporting and verification procedures.

Alternative commercial models may be agreed by the Parties, including an institution-wide Site License; a lower fixed annual license combined with usage-based charges; transaction-instruction or Pay Code service fees; or another mutually acceptable commercial structure.

The indicative schedule establishes the expected commercial basis of a production relationship. It is not a binding production quotation. Production pricing shall be finalized only after the Proof of Concept scope, intended deployment, customer-account basis, support requirements, driver-maintenance obligations, and operating model have been established.

The treatment of applicable taxes, if any, shall be determined and documented in the applicable agreement.

5 Delivery

ODTI shall complete the Proof of Concept within two (2) to four (4) weeks after all required prerequisites have been satisfied.

The prerequisites shall include:

- execution of the Proof of Concept Agreement;
- approval of the Statement of Work;
- designation of project representatives by both Parties;
- confirmation of the selected banking ceremony;
- availability of the agreed test environment;
- provision of applicable API documentation;
- provision of technical credentials;
- provision of required certificates;
- provision of network, security, or access approvals;
- availability of relevant AllBank technical and business representatives; and
- completion of any other dependency identified in the Statement of Work.

The delivery period shall commence only after ODTI confirms in writing that the required prerequisites have been received and are sufficient to begin implementation.

Any delay, deficiency, restriction, or material change affecting a prerequisite shall correspondingly adjust the delivery schedule. Any revised schedule shall be recorded by the Parties.

Completion of the Proof of Concept shall occur upon delivery of the agreed implementation; demonstration of the selected banking ceremony; delivery of the technical findings; delivery of the executive findings; and conduct of a joint completion review.

6 Responsibilities

6.1 AllBank

AllBank shall provide, subject to its internal approvals:

- executive sponsorship;
- business and technical representatives;
- relevant institutional information;
- access to agreed API documentation and technical interfaces;
- required credentials and certificates;
- a suitable test environment, where applicable;
- security and access approvals;
- participation in workshops, testing, demonstrations, and reviews; and
- timely decisions required to maintain the agreed schedule.

6.2 ODTI

ODTI shall provide:

- the provisional x-change platform license;
- institutional and technical discovery;
- installation and configuration;
- institution-specific integration-driver enablement;
- implementation of the agreed Proof of Concept;
- technical support during the Proof of Concept;
- relevant documentation;
- technical and executive findings; and
- participation in the joint completion review.

ODTI shall not require access to AllBank production credentials or production environments unless separately approved in writing under a subsequent stage.

7 Indicative Engagement Path

The Parties acknowledge the following possible progression:

```
Stage 1                Stage 2                Stage 3
Proof of Concept   ->  Joint Evaluation   ->  Pilot Operations

Stage 4                Stage 5                Stage 6
Production License ->  Production Rollout ->  Expansion
```

Stage 1 – Proof of Concept The Parties establish technical feasibility and assess the institutional suitability of the selected banking ceremony.

Stage 2 – Joint Evaluation The Parties review the technical, operational, institutional, and commercial findings. The possible determinations are Proceed, Correct, Pause, or Terminate.

Stage 3 – Pilot Operations Subject to separate written approval, the Parties may conduct a limited production pilot under agreed operating conditions; customer or transaction limits; service scope; controls; support arrangements; success criteria; and review procedures.

Stage 4 – Production License If the Pilot produces satisfactory results, the Parties may negotiate and execute a definitive production license and applicable service agreements. The production agreement may address annual, account-based, site, or usage-based licensing; support; maintenance; driver maintenance; service levels; security; data treatment; commercial responsibilities; and other applicable terms.

Stage 5 – Production Rollout Following the required institutional approvals and execution of definitive agreements, AllBank may introduce the agreed banking service into controlled production according to its implementation priorities.

Stage 6 – Expansion AllBank may subsequently authorize additional banking ceremonies, customer groups, channels, branches, products, or use cases under separately agreed scope and commercial terms.

Successful completion of the Proof of Concept shall not obligate either Party to proceed to Pilot Operations, a Production License, Production Rollout, or Expansion. Each subsequent stage shall require separate written approval by both Parties.

8 Requested Decision

ODTI requests AllBank's approval to proceed with the Proof of Concept described in this Proposal.

Upon acceptance, the Parties shall prepare and agree upon the Proof of Concept Agreement; Statement of Work; project schedule; selected banking ceremony; prerequisites; completion criteria; and respective project representatives.

No pilot or production deployment shall commence unless separately authorized in writing by both Parties.

9 Validity

This Proposal shall remain valid until 19 August 2026, being thirty (30) calendar days from the Proposal Date of 20 July 2026.

Upon expiration, ODTI may revise or withdraw the waiver, commercial terms, pricing, delivery schedule, scope, licensing model, or other terms of the offer.

Acceptance after the stated validity period shall require written confirmation by ODTI.
